

Quality is in demand as ever: Kalle Sponge Cloth F320 in car manufacture.

Buying decisions based on reason will balance economy and ecology in a sound relationship. Accordingly, major German car makers use our Kalle Sponge Cloth for removing grinding swarf. For this application our special quality F320 has been developed.

The Kalle Sponge Cloth will absorb water up to 20 times its own weight, leaving no striae. The cleaning job takes little physical effort.

To prepare the car body for the paint job, wet swarf has to be removed again and again. The wiping material is continually water-soaked and squeezed out in the process, which amounts to heavy mechanical stress. And easy wash-out of the absorbed swarf is essential.

The Kalle Sponge Cloth takes up the swarf totally. It is soft, reaches into narrow grooves.

The sponge cloth must not fuzz. It should be soft and absorbent. Long life is expected. This means money saved, and it helps to cut waste. Our Kalle Sponge Cloth F320 has been designed to fulfill all these requirements. Not to forget: Kalle Sponge Cloth rots in a natural way.

Used Kalle Sponge Cloths can be boiled and washed. Eventually disposed of, they will rot in a natural way.
